REQUEST FOR ANALYSIS OF ROOTS FOR THE PRESENCE OF PHOSPHOROUS ACID

Please submit all samples to:

MA Analytical Services

CUSTOMER:

Name or Trading Name

Physical Address

Postal Address

E-Mail Address

Telephone Number

Mobile Number

Samples:

Collect 5g of white roots. Roots need to be collected randomly across the selected block. **Do not collect old dark roots as they will contain little to no phosphorous acid. Do not wash root samples.**

Place root sample from each block sampled, in a business sized envelope. Mark each envelope with your name and block name from where the roots have been sampled.

Place the envelopes, request for analysis form and the interpretation questionnaire in an express post bag and send to the laboratory at:

**MA Analytical Services
P.O. Box 520
Wellers Hill
Qld 4121**

Results and Recommendations:

In filling out the interpretation questionnaire place a tick in each category for samples 1 to 3. If sending more than 3 samples, a second form will be necessary.

Results will be e-mailed to me and I will complete and send you my recommended program.
